## **HOW TO RESET THE BREAKERS**

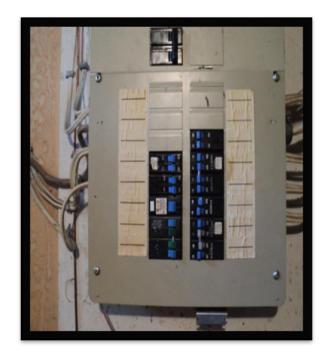

If an outlet or light is not working Please go to breaker panel and turn each one completely off then back on again.

This panel has several double breakers
Normally for the kitchen counter plugs, stove and the dryer.

If any of these are not working Switch both double breakers at the same time completely off then back on again

## PLEASE REMEMBER TO TRY THIS FIRST

If an electrician or a technician is called out and they reset the breakers, there may be a charge to you.
